BASTION CAM

Thanks for choosing the 7452PC Bastion Cam. It's a complete locking solution—this guide walks you through how it works and where it fits best.

OPTIONS

- Can retrofit standard $\frac{3}{4}$ " cam hole
- Standard cam can be placed in 180 degree increments (90 degrees for dual hole cams)
- Cam lock can be installed vertically or horizontally. Before installing the cam, please turn the dials to the correct combination code and then tighten the hex nut.

INSTALLATION

1. Insert lock body through front of $\frac{3}{4}$ " drilled hole
2. Knob will be turned to 'open' to release lock
3. Thread cylinder hex nut and tighten
4. Attach 90 degree stop cam (note that stop cam needs to be placed in position)
5. Attach cam onto back of lock body
6. Secure with star washer, 3-prong washer (must be fitted and bent around the cam nut to prevent nut from loosening) and cam nut
7. When finger pull is not installed, use flat washer
